**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-17 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent 5948036 to Okubo.

Re: claims 1, 2, 4-6, 8-13, and 15-17. Okubo discloses in col. 2 lines 25-28 and in lines 30-43 in a vehicle having a powertrain and an antilock braking system, a method of controlling the ABS comprising: determining one or more natural vibration frequencies of the vehicle, selecting a nominal ABS response to a brake request or target control period and altering the selected ABS response to avoid exciting the powertrain at the one or more determined natural vibration frequencies.

Re: claim 3. In Okubo the normally appropriate response equals the halting of vibrations instead of the abnormal occurrence of vibrations that do not stop as recited in col. 2 lines 27-28.

Re: claims 7 and 14. In Okubo the step of altering the rate equals altering the length of the rate application, as broadly recited. See col. 2 lines 41-43.

***Response to Arguments***

3. Applicant's arguments, see pg. 2, filed 12/21/05, with respect to the rejection(s) of claim(s) 1-17 under 35 USC 102(b) using Sato have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Okubo.
